

Actions of the 2nd Primary School of Drapetsona for Sustainability Issues

Introduction

The 2nd Primary School of Drapetsona to promote sustainability and ecological awareness among its students through various educational and environmental actions. Our goal is to enhance students' awareness of the importance of environmental protection and sustainable development.

Sustainability Actions of the School

Recycling and Waste Management

Students participate in recycling actions and learn proper waste management in their daily lives. We set up recycling bins and educate the community about the importance of recycling.

Water insecurity- Lesson plan

- 1st-grade pupils started to work on how they help our community to save water. The teacher asked the students to brainstorm on the issue of water management. They used keywords on chat GPT so that we could plan the first activities. Our education activities aim to build on students' knowledge of water and encourage personal commitment to good water management behaviors. Those simple activities help connect students with water, help them discover each unit's qualities, and build value and care for water.

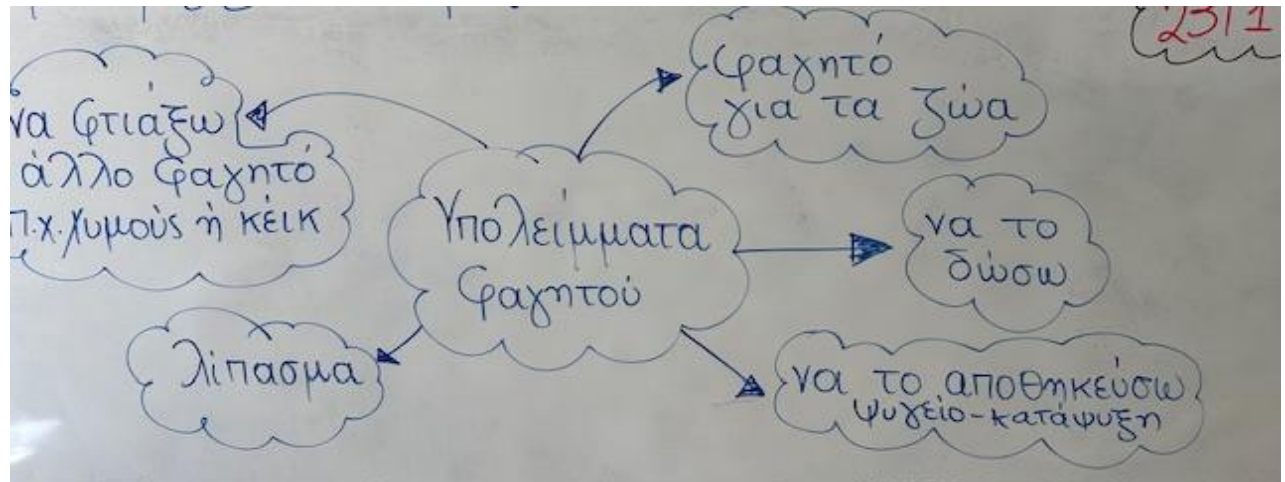

Food Leftovers

- The students of Class B were introduced to the meaning of the word "leftovers," and after understanding it, they tried, with guidance, to comprehend and find ways in which they could use food leftovers.

- Then, with the help of the ChatGPT artificial intelligence platform, two songs were created about food leftovers in both Greek and English. Some adjustments were made, and the songs were ready to be sung by the students of Class B (with the Greek lyrics) and Class D (with the English lyrics). The melody of the songs was suggested by the platform and was based on the song: Twinkle, Twinkle, Little Star.

"Leftover food"!!

recycle,
make compost from scraps you see,
for the planet in this way.

Peels, bread, veggies, all are gold,
these treasures are untold.

little heroes we can be,
keeping our planet debris-free

Make compost from scraps you see,
in this way.

Don't throw away,

all leftover food today,

all

for the planet

Planting and Garden Cultivation

- Students are involved in creating the school garden, planting trees and flowers. These actions strengthen children's connection to nature and promote the importance of biodiversity.

Long-Term Goals

- **Development of Sustainability Awareness**

Our goal is to continue strengthening students' awareness of sustainability issues and equip them with the knowledge and skills to become responsible citizens.

- **Creation of an Environmental Culture**

In the long term, we aim to create a culture that integrates the principles of sustainability into all activities of the school and the daily lives of the students.

- **Expansion of Actions within the School and the Community**

We will continue to expand sustainability actions beyond the school environment, involving parents and the local community in the school's environmental initiatives

Conclusion

- Our school community is committed to continuing its efforts for a more sustainable and greener world. Through students' awareness, sustainability actions contribute to protecting the environment and creating a better future for all.
